2016-2017
COMMUNITY HEALTH NEEDS ASSESSMENT

THOMAS COUNTY

KEY HEALTH ISSUES AND IMPLEMENTATION PLAN
THIS PUBLICATION

As part of a leading regional healthcare provider operating the largest acute-care hospital in the region (Archbold Memorial Hospital), we take the lead in trying to improve the health of the residents in the communities we serve.

**This publication highlights:**
- what we've identified as the top health-related needs in Thomas County, Georgia
- our measured progress since the 2013-2014 CHNA was published
- our path forward for the 2016-2017 CHNA

We encourage everyone in the community to work together to improve the health status of our community and we hope that this overview of community needs helps provide a road map for those efforts.

For additional information on key health needs in our community or outreach programs, please contact Mark D. Lowe, Assistant Vice President of Marketing, at 229.227.5140 or mdlowe@archbold.org.

COMMUNITY BENEFIT: A CORE VALUE OF ARCHBOLD

Archbold has six core values: Quality, Employee Satisfaction, Patient Experience, Financial Stewardship, Growth and **Community Benefit**.

Our core values are not only the concepts we believe in, but also how our success is measured. Our leadership team is evaluated by measurable goals under each core value, including Community Benefit.

COMMUNITY BENEFIT MEANS MEETING HEALTH RELATED NEEDS

We are dedicated to protecting the health and well-being of our communities by providing healthcare to the insured, underserved, uninsured and underinsured. It is our commitment to these communities that enabled us to provide $44,718,384 in community benefit during 2015.

A very important part of our work is to serve those who do not always have access to healthcare because of transportation and financial barriers. Often, we take our programs and services where our patients need them most, in the communities in which they live and work.

Community partnerships are a key to reaching people successfully. We’ve typically worked closely with health departments, community non-profits, YMCAs, local schools, law enforcement, churches, senior services and resource centers, but in this CHNA we outline a new, bolder approach to improving the health of our community.

DEFINING THE COMMUNITY

We define the communities we serve as where we operate hospitals within County borders. In Thomas County, our flagship hospital, Archbold Memorial Hospital, is in Thomasville.
$44,718,384
TOTAL COMMUNITY BENEFIT 2015

$10,076,222
Cost of free or reduced-fee care based on ability to pay

$15,739,061
Cost to support trauma care and subsidize other healthcare services

$568,760
Free screenings, health information and related services

$4,811,043
Scholarships and on-site training support for all healthcare careers

$13,289,607
Cost of care not fully reimbursed by Medicaid

$44,718,384
TOTAL COMMUNITY BENEFIT 2015
Many factors determine healthcare access and use. County demographics can provide a guide to potential challenges in the delivery of care as well as give us an understanding of the challenges facing county residents. A broad view from different sources gives us this insight.

**FOOD INSECURITY**

- 8% of people live in poverty

Percent without reliable access to a sufficient quantity of affordable, nutritious food.
ASSESSING THE NEEDS OF THE COMMUNITY

In order to maximize our impact and operate efficiently, we determine the health needs in the communities we serve through analysis of quantitative federal, state and local data, as well as seeking qualitative input from members of the community, especially the under-served. We have found it very effective to assess the health needs of the community through a combination of approaches. These include:

· utilizing assessments conducted by other organizations
· review of federal and state community health status data
· review of internal data such as patient volumes and screening outcomes
· participating in community organizations that identify needs
· responding to requests from the community

COMMUNITY INPUT

Each year, new information is considered and previously identified needs are validated as the organization sets priorities for outreach efforts. Although annual review of needs sometimes identifies something new, Archbold’s prioritized efforts are directed toward needs that have been consistent over time. These include high rates of certain diseases as compared with the United States and the rest of Georgia and a need to improve access for underserved citizens. Input from community members representing the broader interests of the county was gathered through a combination of written surveys, telephone interviews and in-person meetings. These efforts yielded information that will be used in addressing barriers, allocating resources and assets and determining opportunities to support. Input was considered in determining gaps in services and to identify whether developing new relationships and partnerships was necessary to meet the needs of the community. We relied more on written surveys for this CHNA than in the 2013-2014 CHNA to be able to have a tool that was more comparable. Survey questions included multiple choice and open-ended answers.

Input was gathered from the following sources from June 3–July 25, 2016:

· Douglass High School Alumni Association—Group Meeting and Written Surveys
· Georgia Department of Behavioral Health and Developmental Disabilities—Written Surveys
· Magnolia High School Alumni—Written Surveys
· Southwest Georgia Technical College nursing and faculty members—Written Surveys
· Thomas County Family Connection—Written Surveys
· Thomas County Health Department—(typically representing low-income/minority/medically underserved population)—Written Surveys and Telephone Interview

Qualitatively, the greatest medical needs according to community perception included:

1. High Blood Pressure
2. Obesity
3. Diabetes
4. Mental Health Issues
5. Heart Disease
6. Back/Joint Pain
7. Stroke
8. Drug Addiction
9. Lung Disease
10. Alcohol Abuse

Other qualitative community input is included in the Key Health Needs section of Access to Care, followed by a quantitative analysis of some of the health issues we face every day.
Access to care is an issue that impacts all of the other community health needs on our list. It is the degree to which individuals and groups are able to obtain a broad range of healthcare without excessive economic strain. According to the community input we received, a lack of health insurance remains the greatest barrier to access. Other access issues expressed were the lack of a job and no primary care physician.

**CANCER INCIDENCE SNAPSHOT: 2008-2012**

*All Cancer Sites, All Ages, All Races, Both Sexes. Source: State Cancer Profiles, National Cancer Institute, CDC*
In our last CHNA, we noted that the American Diabetes Association (ADA) estimated the percentage of Americans with diabetes at 8.3%. That metric has risen to 9.3%. The ADA also estimates nearly four million more Americans have diabetes since our last CHNA was published. Further, the ADA estimates 86 million aged 20 and over are pre-diabetic, also an increase. Comparatively, those in Georgia and Thomas County exceed national estimates for diabetes. Diabetes is a disease with serious complications and can lead to premature death, and is the leading cause of blindness and kidney failure.

Nearly 23 million persons in the United States have chronic kidney disease (CKD), and another 20 million are at increased risk for CKD. African Americans, Hispanics, Pacific Islanders, American Indians and seniors are at increased risk. It is very difficult to make statistically consistent comparisons of CKD on a national, state and local level. Variances within specific data sets are so complex and specific enough that attempts to compare would be highly estimated, and perhaps inaccurate.

Two of the main causes of CKD are diabetes and hypertension—potentially reversible conditions with proper diet and exercise—so we are choosing to focus on comparable local and state statistics, in turn, we can provide prevention and early identification efforts.

According to the most recent data released September 2015 from The State of Obesity, a University of Wisconsin Population Health Institute/Robert Wood Johnson Foundation Project, rates of obesity now exceed 35 percent in three states (Arkansas, West Virginia and Mississippi), 22 states have rates above 30 percent, 45 states are above 25 percent, and every state is above 20 percent. Georgia now has the 19th highest adult obesity rate in the nation, according to the same report.

THE KEY HEALTH ISSUES OF THOMAS COUNTY

According to the American Lung Association’s 2016 Estimated Prevalence and Incidence of Lung Disease, Thomas County had a total of 6,596 cases of asthma (1,188 pediatric and 2,781 adult), 2,627 cases of COPD and 30 cases of lung cancer. Data are based on the 2014 Behavioral Risk Factor Surveillance Survey and the 2015 joint report from CDC’s National Program of Cancer Registries, NCI’s SEER program, and state-based cancer registries.

Smoking clearly has a direct impact on respiratory diseases, one reason why Archbold continues to offer free smoking cessation classes to the community. And it’s necessary: the 2016 County Health Rankings and Roadmaps report estimates the smoking rate among adults in Thomas County is at 19%, compared to 17% in Georgia and 14% nationally.

CHRONIC LOWER RESPIRATORY DISEASES MORTALITY: 2012-2013

Age adjusted. Source: GA Oasis, CDC

Stroke kills almost 130,000 Americans each year—about one out of every 20 deaths. However, the risk of having a stroke varies with race and ethnicity. Reviewing Thomas County data from the CDC’s 2011-2013 Interactive Atlas of Heart Disease and Stroke, blacks have a death rate nearly twice that of whites (69.0 deaths per 100,000 compared to 37.2).

The country’s highest death rates from stroke continue to be in the southeastern United States. Further, it appears that while the United States and Georgia have had modest decreases in stroke mortality, the Thomas County rate has risen.

STROKE MORTALITY: 2010-2011, 2012-2013

LOOKING BACK: 2013-2014 IMPLEMENTATION PLAN AND PROGRESS

ACCESS TO CARE

- Document primary care provider for each screening participant
- Provide care options for participants without primary care physician
- Attempt to ensure participants with abnormal screens have follow-up appointments
- Provide information on financial assistance

Each screening participant without proper access to care was offered assistance to find a provider. Attempts to reach screening participants with abnormal results were made in writing or by phone. We also provided free opportunities to learn about end-of-life advance directives, screening recommendations, and non-traditional, integrative approaches to care.

OBESITY

- Evaluate a more significant, consistent and direct role in fighting obesity
- Health Talks specifically addressing obesity
- Free breastfeeding classes
- Start Overeaters Anonymous classes

- More significant obesity role evaluated (Live Better), forms centerpiece of 2016-2017 CHNA
- Not implementing obesity-specific Health Talks until we moved forward with a more comprehensive obesity-based strategy
- Free breastfeeding classes ongoing in Thomasville
- Overeaters Anonymous classes launched and still available, but rarely used

TEEN PREGNANCY AND SUBSTANCE ABUSE

Continue providing consultative and educational support to our community partners as appropriate.

The financial assistance we’ve typically provided community partners has declined from previous years, but we’ve provided assistance financially as we felt was appropriate, and have remained available for consultative and educational opportunities.

HEART DISEASE, KIDNEY DISEASE AND STROKE

- Free screenings with cardiovascular, renal and stroke risk factor-specific testing
- Free public Health Talks in Thomasville

SCREENINGS 2013-2016*

- Heart/Stroke (77)
- Kidney (18)

HEALTH TALKS

- Approaches to treating kidney disease
- Coronary artery disease
- Peripheral artery disease
- Heart disease risk factors, prevention and treatment
LOOKING BACK: 2013-2014 IMPLEMENTATION PLAN AND PROGRESS

CANCER, DIABETES AND RESPIRATORY DISEASE

- Free screenings to detect breast, cervical, colon, oral prostate and skin cancer
- Free monthly tobacco cessation classes
- Free public Health Talks
- Support Groups

HEALTH TALKS
- Physician panel on breast cancer
- Cervical cancer
- Colorectal cancer
- Skin cancer
- Mammography
- How diabetes can lead to digestive disease
- COPD and asthma

SCREENINGS 2013-2016*
- Cancer-specific, excluding Lung Cancer (14)
- Diabetes (57)
- Lung-cancer (132, weekly basis)
- Pulmonary Function (4)

EDUCATION AND SUPPORT
- Oncology tobacco Cessation Classes
- Cancer support groups

*As of the publication of this report

MEASURING PROGRESS FROM 2013-2014

As we implemented the strategies outlined in the 2013-2014 CHNA, we gave great thought to how we would view our “results.” We could easily note the effort made to address each group of health needs quantitatively, but only in terms of ones of volume (number of free screenings, number of screening types, number of free community health talks, etc.) or nominal values (yes, no). Since nearly all available data online is epidemiological data, there is a lag—sometimes years—in reporting, and therefore a lag to truly determine impact. What we couldn’t measure was whether we had an effect on improving the actual conditions or disease states we identified as necessary to address. In the spirit of raising our level of effort to truly “move the needle,” our methods for moving forward in the 2016-2017 CHNA shifted, as the remainder of this CHNA outlines.
MOVING FORWARD

One of the plans in the 2013-2014 CHNA to fight obesity in Thomas County was to evaluate a more significant, consistent and direct role in fighting obesity. As stated in the plan, a community pilot project would be evaluated during fiscal year 2013-14 in Thomas County. Part of the evaluation would address childhood obesity; the other part adult obesity.

LIVE BETTER

During the evaluation period, a challenge came from our CEO, Perry Mustian: Raise the bar on our clinical outreach efforts, and look beyond the walls of the hospital to do it.

So, we researched what other hospitals were doing with community partnerships to improve obesity. There was a common theme with several of the hospitals—they had, in fact, reached out to others in the community to figure out a way to work together to improve the health of their communities. Most often, a hospital would partner with a municipality, or a school, or a large business in some limited effort.

We thought, what if we found not just one large partner in the effort, but several key partners to form an alliance? Having more than one partner at the table formed a type of 360-degree approach of tackling the problem, which we felt would help make any effort that much stronger.

That’s really when our concept started to form. Very little of the average person’s life is spent at a hospital or in a doctor’s office, yet there’s still a need every day for people in our community to have the ability to make healthier choices, and that making an effort to change the environment and culture we live in was really going to be the key to actually making a difference.

That led to forming Live Better, a health initiative with a long-term focus. We created an advisory group with leaders from key sectors of the community that could make decisions for their organizations: from Archbold, the City of Thomasville, the Thomas County Board of Commissioners, Thomas County Schools,

Thomasville City Schools, the Thomas County-Thomasville Chamber of Commerce, and the Thomasville Times-Enterprise.

Essentially, the members in the advisory group will collaborate, problem-solve and put into action solutions that leverage the strengths of what each member organization can offer. We will have measurable goals, and make data-based decisions to adjust our strategies until we find what works best. It’s going to be an ongoing and very visible effort. What we’re trying to accomplish will likely happen incrementally, but we have to start now and not let up. Our obesity rate and prevalence of chronic disease are typically higher locally than compared to Georgia and U.S. averages and are generally rising, and the impact of poor health on our families and businesses are profound. The need to improve the health of our community and reverse our negative health trends is in our collective best interests and should remain a high priority.

SETTING PRIORITIES

Our first step was to determine how we could have the most impact on improving the health of our community given available resources, greater financial constraints, and not taking on commitments that were best served by other community entities.

In the 2013-14 CHNA, we noted that the communities we serve represent the some of unhealthiest counties in the country. We also noted that obesity is the common denominator with many of the same disease states we already identified as areas to address. If we reduce obesity, we have great potential to reverse negative trends in heart disease, stroke, COPD, sleep disorders, vascular disease, diabetes, cancer, arthritis, spine problems and other conditions.
We plan to continue prevention and early detection efforts, but primarily through focusing on obesity. And although obesity will be our focus, there is still a need to address other key health issues individually with similar tactics. We will continue to use doctors, mid-levels, nurses and other clinicians for education and screenings as needed. In addition to a full-time clinical outreach manager, we will provide part-time clinical staff, laboratory use clinical supplies and resources for other contingencies. Unlike in years past, we will also have the collective efforts of the Live Better advisory group, supportive partners and volunteers to rely on.

Initially, as our goals reflect, we expect very incremental progress. Ultimately, though, we wish to change the culture in Thomas County to the point that the concepts, programs and lifestyles promoted and delivered through Live Better become the norm, and not a defined “health initiative.” Realistically, this will take at least a generation (or longer).

NEEDS NOT ADDRESSED

Not all health needs are easily addressed by Archbold. Further, keeping too broad of a focus will dilute the impact we can have on each health need. These are some of the primary reasons we are no longer including teen pregnancy and substance abuse in our implementation plan. Our biggest opportunity is to help with improving disease states, remaining available for assistance with other health needs as requested and as time and finances permit. We will address mental health issues, but more from our psychiatric service line than through clinical outreach/community benefit.

2016-2017 IMPLEMENTATION PLAN

For the 2016-17 CHNA, our plan to address obesity, and, in turn, the disease states that obesity impacts is:

- **Increase the number of students in grades K-5 who fall within the Healthy Fitness Zone by 3%,** as measured by the BMI using the Fitness Gram assessment, during the 2016-17 school year (Measure using real-time school data)
- **Decrease the average of percent of adults in morbidly obese and obese BMI categories** in a sample population of over 10,000 Thomas County residents by 1%, from 50% to 49%, from Aug 2016 to Aug 2017 (Measure using real-time EHR data sample)

To do so, we are working with our advisory group members on specific projects in each of the sectors of the community they represent, as well as our own:

- **Business** – Recruiting restaurants to identify healthy choices on their menus, as well as create specific Live Better-endorsed meals, working with grocery stores to display Live Better Buys for sale-priced healthy foods, further researching how to address food deserts and food insecurity
- **Government** – Inclusion on city and county planning committees to address community exercise paths and making Thomas County more walk/bike/run-friendly through policy and public events
- **Hospital** – Continuing prevention and early identification efforts with educational lectures, cooking classes and screenings
- **Media** – Keeping Live Better prominently featured in news stories to retain issue saliency and priority
- **Schools** – Creating and delivering educational curriculum for grades K-5 to supplement existing health education
